## PORT MELBOURNE POP-UP FARM

Biofilta Foodcubes are made in Australia from recycled plastic. They are designed to be a modular system that uses state of the art “wicking bed” principles to maximise growth and minimise water use.

This Pop-Up Farm was installed at Cirrus Fine Coffee Roastery in Port Melbourne.

They wanted to turn the organic by-products of the coffee roasting process into a value-adding input for a vegetable garden. We partnered with TSLC who designed a landscape which turned 2 car-parking spaces into a productive, self-watering urban farm, complemented by a seating area for employees to relax and enjoy the amenity.

Our wicking beds produced 25 kilos of produce per square metre, captured rainwater in a concrete environment, and drawn a diverse range of insect and bird species to an otherwise industrial area.

Recently winning the Landscaping Victoria Master Landscape Award for Sustainable Landscapes 2019, it has also hosted many educational groups and been the subject of a Gardening Australia segment.

# FormBoss

STEEL GARDEN EDGING

FormBoss is proud to partner with Biofilta to provide custom made, no maintenance “weathering steel” paneling to fit perfectly around any configuration of Foodcubes.

The Australian made steel paneling is easily fitted to existing Foodcubes and is designed to integrate beautifully with the FormBoss steel garden edging system.

Tree ring extenders and panel sets are available directly through FormBoss distributors Australia wide, phone 13 11 37 for details.
