

"grow" concentrate

What are the benefits?

- Kickstart growth.
- · Build strong stems and roots.
 - Grow lush and large leaves.
 - Fix nutrient deficiencies.
- Increase plant's natural function.

2 weeks of "grow"

Use every fortnight or every second time you water your plants. Combine with Protect and Support for optimal care.

Step 1

Shake well to aerate and wake the sleeping microbes.

Step 2

At the bottom of your watering can, add 1 squirt of concentrate for every litre of water. Supercharge your solution by dissolving 1/4 teaspoon of sugar.

Step 3

Add standard tap water. The solution should look like a cup of weak tea.

Step 4

Pour over your plants until the solution runs out of the bottom of the pot, or soil is well soaked.
