PLANT CARE

“support” pellets

What are the benefits?

- Builds healthier and stronger roots.
- Removes toxins and salts from soils.
- Increases tolerance of overwatering & underwatering.
- Provides slow release nutritional support.

We the Wild

How to use

Add to pots and planters every two months, or mix into soil when repotting.

Step 1

Scatter pellets evenly on top of the soil (1 tbsp for small plants and 2 tbsp for large plants).

Step 2

Using a small trowel or spoon, loosely dig the pellets into the topsoil.

Step 3

Thoroughly water your plant, ideally using our Grow Concentrate, to bring the beneficial microbes and nutrients to the plant's roots.

Step 4

Watch over 2 months, as the pellets slowly break down to convert your soil into a biodiverse and nutrient-rich environment.
